

# IMPROVING QUALITY OF LIFE IN EPILEPSY

This example provides you with one possible way to identify interventions that may impact your patients' quality of life scores.

Use quality improvement methodology to determine key drivers and then interventions for implementation.

Each provider will need to create an individualized intervention plan based on local key drivers.

This serves as an example and not necessarily what will work for every provider or practice.

For more information on identifying a quality improvement methodology, visit the AAN's QI Toolkit at [AAN.com/policy-and-guidelines/quality/quality-improvement/quality-toolkit-and-resources](http://AAN.com/policy-and-guidelines/quality/quality-improvement/quality-toolkit-and-resources).
